

**16th PNEC International Conference on Petroleum
Data Integration Information and Management – Exhibitors
May 15-17, 2012**

We appreciate your support of these Fine Exhibitors

COMPOSITE
— S O F T W A R E —

Composite Software

Composite Software is the data virtualization gold standard at ten of the top 20 banks, six of the top ten pharmaceutical companies, four of the top five energy firms, major media and technology organizations, and multiple government agencies. These are among the hundreds of global organizations with disparate, complex information environments that count on the Composite to increase their data agility, cut costs and reduce risk. Backed by nearly a decade of pioneering R&D, Composite is the data virtualization performance leader, scaling from project to enterprise for data federation, data warehouse extension, enterprise data sharing, real-time and cloud computing data integration. www.compositesw.com

Dexa Systems, Inc.

Dexa Systems, Inc. is a privately held company that provides cyber and physical security solutions for Critical Infrastructure (CI) industries, including oil and gas, utilities, petro chemicals, pipeline, and storage. Dexa started out as a security division of Schlumberger in the late '90s and began operating as an independent company in 2008. Today, our products and services are recognized throughout the energy industry for securing cyber physical systems and resources. We have a strategic security framework to assist our clients in developing a next generation security strategy. Our engagement model includes embedding our team of experts with our clients to combine core competencies that result in efficient execution and sustainable corporate security. Dexa's key offerings include: cyber and physical identity management; cyber-security assessment; Security strategy and remediation. Our solutions are delivered via consulting using our experienced in-house resources and through our eco-system of partners; systems integration; and best of breed products and tools. We manage all projects from start to finish, providing one point of contact for our clients. We have a powerful, award-winning team with the vision, knowledge and experience to provide tangible benefits. Dexa team members have unique areas of concentration and have accomplished great things in their respective field through client engagements, patents, publications, and more. Our group includes both seasoned industry executives and pioneers in the area of cyber-security. Our combined abilities are unparalleled in the industries we serve. Visit us at: www.dexasystems.com

Energistics

Energistics facilitates an inclusive global user community for the development, deployment and maintenance of collaborative technologies through open data exchange standards. These freely-available standards deliver business value to the upstream oil and natural gas industry by enhancing process efficiencies across the entire E&P life cycle. A membership-sponsored organization, Energistics focuses on standards-based technological, computing, and process solutions for efficient data and information handling, storage, management and exchange. Facilitating the deployment of integrated technical and business information standards allows for interoperability improvements between trading partners and implements open standards solutions that deliver tangible bottom line results. www.energistics.org

Enigma Data Systems Inc., a Reservoir Group Company

Enigma Data Solutions Ltd., a Reservoir Group Company. Increasingly, knowledge drives value. But no one knows which data will yield precious knowledge in the months or years from now. The challenge is to save all useful data and give users rapid access without tying up terabytes of production disk. By using Enigma's project archiving (PARS), tape management (IDS) and Information Lifecycle Management solutions, organizations are able to classify and retain their data assets across the most appropriate tiers of storage, matched to their determined strategic and legal values. Over the last twenty years our products and services have been successfully implemented in many large organizations. We have been especially successful in the Oil and Gas industry supplying tailored, project-based archiving, backup, and tiered storage solutions. www.enigmadata.com

ETL Solutions

At ETL Solutions we provide data integration software and services for technical data management. We have a ten-year proven track record in the Oil & Gas industry, which includes migrating data and developing data connectors. Our product, Transformation Manager, is a toolkit for developers and is used by the world's largest oil companies and leading software vendors in E&P data management. Transformation Manager has received Gold certification from the PPDM Association. www.etsolutions.com

Fiorano Software Inc.

Real time data is the key to profitability and operational efficiencies whether it relates to data on pressurizing and fracturing oil and gas formations or upstream oil and gas production; The Fiorano integration platform reduces your reliance on manual intervention, improves utilization of existing SAP or other ERP investments, giving you real-time visibility across multiple operational assets and disparate data. Our platform integration capabilities enable you to dynamically access key data relating to oil field assets, measurements and regulatory compliances, helping you to make optimized, sense-and-respond business decisions. Global leaders, including Fortune 500 companies have deployed Fiorano to drive innovation yielding unprecedented productivity. Read Case Studies and View Customer Testimonials at www.fiorano.com

geoLOGIC systems ltd

For 29 years geoLOGIC systems ltd. has been providing data and decision support tools paired with industry leading customer support and integrated training solutions to the petroleum industry. geoLOGIC is an innovator in supplying high quality data in more accessible and usable forms to help clients make better decisions – from the well head to senior levels of management. geoLOGIC is based on Professional Petroleum Data Management Association (PPDM) standards and was the first of its kind in North America. As a strong supporter of PPDM, geoLOGIC is developing data loading, data management and administration procedures and processes for the implementation of PPDM. Along with partner Energy IQ, geoLOGIC has launched PPDM In A Box, integrating proprietary and industry well data for MDM for wells, using PPDM 3.8. www.geologic.com

Halliburton

Landmark, a brand of Halliburton, is the leading supplier of consulting services and software for the upstream oil and gas industry. Our solutions span exploration, production, drilling business decision analysis and data management, in addition to a broad range of industry-leading consulting services that enable customers to optimize their technical business and decision processes. During the past 20+ years, Landmark has helped customers around the world lower their finding, lifting and production costs, reduce cycle times and boost productivity and profitability. By integrating the data and applications needed to find, develop, and produce hydrocarbons, Landmark facilitates greater teamwork across multiple disciplines throughout the industry. www.Halliburton.com

IBM

As an upstream petroleum production company, you need tools that enable evaluation and action — on demand — so you can respond quickly to business needs. Solutions such as the Intelligent Oil Fields for Exploration and Production offering from IBM help enable remote, collaborative management of reservoirs, facilities, plant, and equipment — with near real-time information. IBM is uniquely positioned to deliver innovative industry solutions across the C&P value chain based on our deep R&D capabilities, comprehensive hardware, software and services portfolio, extensive industry experience and unmatched global presence. IBM prides itself on creating a genuine partnership with our clients focused on business results. We invest heavily in innovation in the Chemical and Petroleum industry, and bring this benefit to our client-partners. Visit www.ibm.com/chemicalspetroleum for additional industry-related information from IBM.

IHS

IHS is the leading provider of critical information and insight in the energy industry. IHS provides a comprehensive suite of information services to the worldwide oil and gas industry – from log, well and production data to economic applications and Physical Asset Management. IHS services and solutions support oil and gas professionals as they monitor activity in their areas of interest. www.ihs.com/energy

Informatica

Informatica provides data integration software and services that enable organizations to gain a competitive advantage in today's global information economy by empowering them with timely, relevant and trustworthy data for their top business imperatives. This includes Application ILM, B2B Data Exchange, Cloud Data Integration, Complex Event Processing, Data Masking, Data Quality, Data Replication, Data Virtualization, Enterprise Data Integration, Master Data Management and Messaging. www.informatica.com

iStore

The Information Store (iStore) develops pragmatic software solutions that solve the current information challenges of the upstream petroleum business. The company's PetroTrek suite of digital oilfield products reach out to exploration and production (E&P) data sources, creating real-time integrated views that dramatically improve data availability and utilization across disciplines. iStore's holistic approach creates business value quickly through improved data access and visualization while solving data quality and accuracy with the PetroTrek Data Management System (PDMS). A Gold Compliant PPDM product, PDMS gives data managers powerful web-based tools to integrate, load, edit, QC, and enforce E&P data standards. iStore's team of geologists, engineers, geophysicists, data managers, landmen and IT professionals average over 20 years of industry experience and combine an intimate knowledge of how the oil industry works with a technology approach designed to bring people and information together in business context to generate immediate and sustainable value. Visit www.istore.com

INT, Inc.

INT provides high performance C++, Java, and .Net data visualization tools and components. Products include INTViewer for interaction with integrated geophysical, and geologic data, web-browser based viewers for seismic, logs, and well data, visualization components for application developers, plus custom software development services. www.int.com

KADME

KADME is a leading provider of information management software and services to the Oil and Gas industry. We deliver software solutions for enterprise search and retrieval, knowledge management and workflow integration. Our vision is to simplify access to data, information and knowledge for all users in any company in the Oil and Gas industry with Whereoil Enterprise. Whereoil lets you find and manage all your data, structured or unstructured, wherever it is: on your disks, in your interpretation projects (including Petrel® or SMT Kingdom®), on the public Internet, or in a country's National Data Repository. www.kadme.com

NetApp™

NetApp

NetApp creates innovative storage and data management solutions that accelerate business breakthroughs and deliver outstanding cost efficiency. Customers around the world choose us for our “go beyond” approach and broad product and service portfolio. Our solutions can help you deploy new capabilities with confidence and get to revenue faster than ever before.

www.netapp.com

Neuralog

NeuraDB is a PPDM 3.7 based Master Data Management solution that can serve as your well master, well log repository, well file and knowledge management system. NeuraDB is scalable and flexible and can be deployed by module to work with existing data management and ArcGIS infrastructure. NeuraDB ArcMap Extension and NeuraDB Web Services offer users easy options to connect to and query their well and log master from/with their ArcGIS. www.neuralog.com

Open iT, Inc.

Open iT, Inc. is a leading provider of IT asset management software for optimizing enterprise IT resources. The software meters, analyzes and optimizes usage, giving management an overview of which IT assets are being used, by whom, and for how long. Open iT enables management to align IT assets with business activity, to implement internal chargeback based on actual use and to identify true IT asset needs. Open iT is a proven metering solution for E&P environments worldwide. www.openit.com

TIBCO®
The Power of Now®

OpenSpirit Group, TIBCO Software Inc.

Multi-vendor environments are necessary to fully leverage the diversity of analysis and tools needed to manage today's E&P workflows. The integration platform from OpenSpirit Group, TIBCO Software Inc., has transformed the vision of best-of-breed workflows to an industry-accepted best practice. We enable your business-critical workflows across data management, intelligent GIS, data access, and cross-application interoperability. www.tibco.com

Paradigm

Paradigm, the largest independent provider of software technologies for the upstream oil and gas industry, offers Epos^{®4}, a single comprehensive subsurface data management solution that supports the needs of collaborative asset team interpretation with cluster-based seismic data processing, structural and reservoir modeling, characterization, simulation and formation evaluation activities, on Linux[®] and on Windows[®] systems. www.pdgm.com

Petris

Petris is a leading supplier of practical data management solutions and geosciences applications to the global energy industry. Founded in 1994 and with over 500 clients throughout the world, Petris leverages its insight and knowledge to design technology that integrates information from diverse data stores including financial, seismic, borehole, production, drilling, and pipeline to enable continually better decision making and application transparency. Petris products include Analytics, DataVera, DrillNET, Enterprise, OneCall, OneTouch, Operations Management Suite, Recall and ZEH Plotting Solutions. www.petris.com

PETROSYS

Petrosys has been helping E&P companies implement successful data management strategies for over two decades. These strategies include the management of well headers, directional surveys, formation tops, seismic locations, leases and physical assets. Petrosys' international clients range from NOCs to super majors to independents. The PPDM data model and an advanced web based interface is the backbone of Petrosys' data management solutions. www.petrosys.com.au

PointCross, Inc

PointCross, Inc. is a global technology provider of advanced strategic business solutions to knowledge-rich, decision centric markets in the Upstream Oil & Gas industry. We specialize in solutions for knowledge discovery, enterprise search, metadata management and decision processes. Our solutions are also applicable to other industries as well such as Pharmaceutical, Bio Tech and Defense. Our strengths are rapid configuration of complex solutions, with flexibility for our customers, providing the highest levels of information security and compliances, and the ability for users and applications to search and navigate through structured and unstructured information. We can configure and deploy business solutions in 1/5 the time and costs it takes for other IT companies. www.pointcross.com

PPDM Association

The Professional Petroleum Data Management Association is a global not-for-profit organization through which world-wide members cooperate to set information standards that enhance profitability. Information standards such as PPDM 3.8, released in 2008, and the "What is a Well" baseline definitions, help companies achieve clarity and make information sharing more effective. www.PPDM.org

RoQC Data Management LLC

RoQC Data Management LLC develops and sells an advanced data management software package called RoQC Tools. RoQC Tools provide an exceptionally powerful, and fast, data management environment for Landmark's OpenWorks 2003 and R5000. They are tools that help you rapidly clean up and manage your data. They cover the full cycle of standards distribution, the identification of non-standard data, and rectification of non-standard data. In addition to software, RoQC provides consultants with expertise in data management to cover everything from support of G&G software, project management and development of corporate data management procedures, via programming, database administration and user training, to loading, QC and cleanup of data. Visit us at www.roqc.no

SAS Institute Inc.

Oil and gas firms worldwide rely on SAS to deliver the data management, advanced analytics and business intelligence required to drive world-class performance and operational excellence. SAS specializes in data-driven decision making for E&P optimization, predictive maintenance, oilfield production forecasting, and energy trading and risk management. Our analytical solutions can support efforts to optimize exploration in both mature fields and unconventional sources, to improve uptime of critical assets, and to reduce financial and regulatory risk. Visit sas.com/oilgas for more information on SAS® solutions and SAS-authored SPE papers, or to download these free white papers: *Text Mining for Safety*, *SAS Exploration and Production Optimization Analytics for the Oil and Gas Industry*, *Getting Real Value from Your Data*, *Dodd-Frank Title VII Compliance and Demystifying Data Mining*. With more than 35 years of experience in this industry, SAS provides oil and gas companies with the ability to create intelligence from new data sources and deliver information for effective decision making across the enterprise.

Schlumberger

Schlumberger Software

Schlumberger provides E&P software solutions to solve today's tough reservoir challenges by enabling the creativity of geoscientists and engineers through innovative workflows and comprehensive global services. Visit us at www.slb.com

SENERGY

Senergy is a global energy services company providing high performance energy services and solutions. One of Synergy's main products is the Oilfield Data Manager (ODM™) – a subsurface application for the integration, interpretation and presentation of well based data. ODM™ uses the most flexible geological database structure possible to allow it to store, manage and display virtually any type of downhole, field history and engineering data. The result is a single location from which all related field-data can be stored, cross-referenced and managed. Additionally, grids, GIS, websites and documents can all be linked to the system, making ODM the single source for accessing all available field data. Linked directly into this database are ODM's interpretation and visualization tools. Using a familiar interface, ODM enables quick and accurate generation of wellsticks, correlations, projections and much more. www.senergyworld.com/odm

Shell

Shell is a global group of energy and petrochemical companies. With around 93,000 employees in more than 90 countries and territories, Shell helps to meet the world's growing demand for energy in economically, environmentally and socially responsible ways. Read more about our strategy and major projects. Our core values of honesty, integrity and respect for people form the basis of the Shell General Business Principles. Our people are central to the delivery of our strategy and we involve them in the planning and direction of their own work. We create a work environment that values differences and provides channels to report concerns. At Shell, Technical Data Management is part of the Information Management Technical Discipline, and considered a profession with a job ladder, job descriptions and job competencies. Visit us at www.shell.com and check out career opportunities at Shell DM Jobs (Specialization Group: Information Management/Information Technology).

Teradata

Teradata is the world's largest company focused on integrated data warehousing, big data analytics, and business applications. Our powerful solutions portfolio and database are the foundation on which we've built our leadership position in business intelligence and are designed to address any business or technology need for companies of all sizes. Only Teradata gives you the ability to integrate your organization's data, optimize your business processes, and accelerate new insights like never before. The power unleashed from your data brings confidence to your organization and inspires leaders to think boldly and act decisively for the best decisions possible.

Learn more at www.Teradata.com

Tiandi Energy

Tiandi Energy

Tiandi Energy is geosciences and engineering consulting services company providing teams of high quality, experienced professionals to the upstream oil and gas industry. Tiandi provides services in three core areas - reservoir, production and data management projects. Data management services include post-acquisition well data loading and verification, core database clean up, wellbore schematic build and log cleanup. Reservoir services include build and verify static models in Petrel and other tools, history matching, reservoir simulation using Eclipse, VIP, Tempest and other platforms, and well location suggestions. Production services include well design, workover design, artificial lift design, and decline curve analysis. www.tiandienergy.com
